India and Central Europe Jun 22 2022 This book explores the transformation of India's relations with Central and Eastern Europe from being a subset of Indo-Soviet relations during the Cold War to the rediscovery and rebuilding of relations with the region almost from scratch in the post-Cold War era. It examines how the combination of Brexit, the rise of China and India's expanding geo-economic interests in Europe has led the Narendra Modi government to contemplate relations with Central Europe through a more strategic lens and treat the region as an autonomous element within India's foreign policy rather than a footnote of its relations with other great powers. Fulfilling a long-felt gap in existing literature, this volume examines India's political, economic, investment, defence and cultural relations with the Visegrad Four (the Czech Republic, Hungary, Poland and Slovakia). It analyzes Indian perceptions of Central Europe and explores prospects of New Delhi's political and economic engagement with the region. The

painstakingly compiled appendices on the exchange of bilateral visits and agreements between India and the Visegrad Four would be of immense use as a handy reference to scholars, policy-makers, and other interested persons and institutions.

The Pearson General Studies Manual 2009, 1/e Jan 17 2022 This latest edition of The Pearson General Studies Manual continues to provide exhaustive study material for the General Studies paper of the UPSC Civil Services Preliminary Examination. This student-friendly book has been completely revised, thoroughly updated and carefully streamlined and is strictly exam-centric. In this new edition, a large number of new boxes and marginalia"with additional and relevant information"have been added to provide cutting-edge information to the aspirant. Readers will find that important facts and information have been presented in the form of well-structured tables and lists.

Liberalisation and Industrial Development in the Third World Aug 20 2019 "This book is a good addition to the literature as it brings out a detailed microlevel comparative analysis of the industrialization experiences of the two countries. This could provide certain useful insights into what went wrong with Indian policy at the microlevel and also what could be the role of industrial policy in the context of the recent economic reforms.... The authors have chosen four engineering industries for a detailed comparative case-study.... The choice of industries is quite appropriate.... This detailed and painstaking study of the process of acquisition and maturation of firms in these industries brings out some very useful conclusions." --International Journal of Development Banking "This is an insightful book with a number of refreshing characteristics. First, it provides a simple non-technical survey of a broad range of literature on the infant industry argument for protection. Second, it uses evidence from case studies to draw a lot of insightful policy prescriptions, which are very relevant in the world today. Third, the book will be of interest to a varied audience ranging from students to specialists carrying on research in industrial economics." --The Journal of Entrepreneurship "A reading of the book is suggested to enhance our learning about the role of government policy in preparing firms for international competitiveness and about a contemporary economy that has seemingly done well in similar industries as well as for a comprehensive understanding of competitiveness as seen in the backdrop of an overlap of the concepts of domestic entry and international entry. The book also provides exhaustive case studies of the engineering industry, machining centres, hydraulic excavators, integrated circuits, and an enriching comparison of evolution of these industries in Korea and India." --Vikalpa "A very well researched and documented study." --Asian Economic Review How does industrial policy in third world nations relate to the role of liberalization in improving industrial performance? This is the central question addressed in this timely, informative study. Using unique firm-level data from the engineering industries in India and South Korea, this lucid study charts the evolution of firms and industries during the liberalization process which took place in both countries during the 1980s. After a detailed description of the changing policy frameworks in both nations, four extensive case studies are presented. These case studies are blended with the results of a number of other case studies to yield an analysis of a variety of phenomena such as the nature of infancy, the evolution of entry barriers to international industry, and the role of previous policy regimes in the accumulation of competitive capabilities. Owing to its unique combination of management science, industrial economics, and development economics, this book will interest a broad range of readers, including economists, political scientists, management experts, and industrialists.
