The previous edition of the International Encyclopedia of Ergonomics and Human Factors made history as the first unified source of reliable information drawn from many realms of science, technology and created specifically with ergonomics professionals in mind. It was also a winner of the Best Reference Award 2002 from the Engineering Libraries Division, American Society of Engineering Education, USA, and the Outstanding Academic Title 2002 from Choice Magazine. Not content on his laurels, human factors and ergonomics expert Professor Waldemar Karwowski has over his standard-setting resource, incorporating coverage of tried and true methods, fundamental principles, and major paradigm shifts in philosophy, thought, and design. Demonstrating the truly interdisciplinary nature of this field, these changes make the second edition even more comprehensive, more informative, more, in a word, encyclopedic. Keeping the format popularized by the first edition, the new edition has been completely revised and updated. Divided into 13 sections and organized alphabetically within each section, the entries provide a clear and simple outline of the topics with precise and practical information. The book reviews applications, tools, and innovative concepts related to ergonomic research. Technical terms are defined (where possible) within entries as well as in a glossary. Students and professionals will find this format invaluable, whether they have ergonomics, engineering, computing, or psychology backgrounds. Experts and researchers will also find it an excellent source of information on areas beyond the range of their direct interests. The Landing Vehicle Tracked (LVT) was a class of amphibious war vehicle, a small landing craft, introduced by the United States Navy, Marine Corps and Army during World War II. Originally intended solely as cargo carriers for ship to shore operations, they rapidly evolved into assault troop and fire support vehicles as well. The LVT Mark I was the first military model. Traveling at a respectable six knots in the water and twelve mph on land, it could deliver four fully equipped assault troops to the beach. Though it was only intended for delivering supplies inland until wheeled vehicles could be brought ashore, the LVT could supply supporting fire from .30 cal M1919 Browning machine guns. Many LVTs were refitted prior to the Tarawa landing with two .50 cal Browning heavy machine guns forward, with the .30 cal guns aft. The vehicle was not armored and its thin steel hull offered virtually no protection, although prior to Tarawa some received nine mm of armor plating to the cab. The LVT's tracks performed well on sand, but not on tough surfaces. The rigid suspension threw tracks and roller bearings corroded in salt water. The maintenance of the new machine was often an issue, as few Marines were trained to work on them. Early models suffered frequent breakdowns. The LVT Mark II featured new powertrain and torsion bar suspension. The aluminium track grousers were bolted on, making changes much easier since they could be put out quickly on land and more so on coral. Hard terrain performance was much better compared to the LVT Mark I. Created in 1944, this technical manual reveals a great deal about the LVT's design and capabilities. Intended as a manual for those charged with operation and maintenance, it details many aspects of its engine, cooling, fuel, powertrain and other systems. Originally labeled restricted, the manual was declassified long ago and is here reprinted in book form. Care has been taken to ensure the integrity of the text.

The fourth volume of Dr Needham's immense undertaking, like the fourth, is subdivided into parts for easy assimilation and presentation, each part bound and published separately. The volume as a whole covers the subjects of alchemy, early chemistry, and chemical technology (which includes military inventions, especially gunpowder and rockets; paper and printing; textiles; mining and metallurgy; the salt industry; and ceramics).
