From President Obama to Prime Minister Singh, Leaders worldwide now cite innovation as crucial to the future prospects of their respective nations and to global commerce in general. In India Inside, authors and respected London Business School professors Nirmalya Kumar and Phanish Puranam claim that the long-held monopoly on innovation by Western corporations is over---and that nations, policy makers, and organizations need to look East to a hidden movement that is changing how innovation happens. In India Inside, Kumar and Puranam deliver a wake-up call to thinkers and companies in the developed world, as well as to policy makers in India This book discusses the increasing use of contract labour in India that has accompanied attempts to liberalise the economy. After briefly examining Indian labour laws and public policy, it juxtaposes the country's labour market practices with international labour standards. The questions that are raised are then explored through a series of empirical studies investigating the use of contract labour in a variety of industries and locations, manifesting a wide-spectrum of concerns including labour standards, productivity and employment relations. The set of comparative research studies within India are supplemented with a field study from the Shenzhen and Guangzhou industrial regions of South China, which are in an advanced stage of industrial development. The unprecedented inflow of capital into China has captivated many developing countries, including India, which has gone on to mimic similar strategies particularly in terms of labour market deregulation. In this context, a set of crucial questions arise – can enforcing 'labour market flexibility' in itself provide the required impetus for a nation's industrial growth? Is the Chinese success in becoming the major destination for foreign direct investments (FDIs) a consequence of a flexible labour regime or is there some other concealed strength to be found in Chinese labour market institutions? In particular it needs to be noted that after double-digit growth for more than 25 consecutive years, China has recognised some of the fallacy of its development path and in 2008 adopted fairly stringent labour laws, which now regulate its labour market. This Chinese trajectory perhaps has lessons for India and other countries that are still struggling on the liberal path. In particular, the Chinese example helps put the Indian field studies in perspective and provides insights into India-specific policy recommendations that could also be useful for the developing world. The book concludes with the observation that where production entails long-term relationships, the interests of both the employer and the workers need to be maintained sustainably. As the title suggests, the book provides takeaways, not only for academics and researchers working in this field but also for lawyers, consultants, politicians, bureaucrats, and policymakers. This book covers an array of issues on emerging agricultural engineering and technology, featuring new research and studies. The volume is broken into three parts: emerging technologies, energy management in agriculture, and management of natural resources, in which particular attention is paid to water management, a necessary consideration for successful crop production, especially in water-scarce regions. Topics include: alleviating drainage congestion solar energy for agriculture anaerobic digestion by inoculation with compost self-propelled inter-cultivators agrobiodiversity watershed development and management This volume offers academia, engineers, technologists, students, and others from different disciplines information to gain knowledge on the breadth and depth of this multifaceted field of agricultural engineering. There is an urgent need to explore and investigate the current shortcomings and challenges of the current innovations and challenges. Agricultural mechanization in Africa south of the Sahara — especially for small farms and businesses — requires a new paradigm to meet the needs of the continent's evolving farming systems. Can Asia, with its recent success in adopting mechanization, offer a model for Africa? An Evolving Paradigm of Agricultural Mechanization Development analyzes the experiences of eight Asian and five African countries. The authors explore crucial government roles in boosting and supporting mechanization, from import policies to promotion policies to public good policies. Potential approaches presented to facilitating mechanization in Africa include prioritizing market-led hiring services, eliminating distortions, and developing appropriate technologies for the African context. The role of agricultural mechanization within overall agricultural and rural transformation strategies in Africa is also discussed. The book's recommendations and insights should be useful to national policymakers and the development community, who can adapt this knowledge to local contexts and use it as a foundation for further research. Demand for mechanization in Nigeria is growing in a fairly consistent way predicted by economic theories. The farming system has intensified and the use of animal traction has grown at a substantial rate. Demand side factors considerably explain the low adoptions of tractors in Nigeria. Where demand is sufficient for tractors, the private sector has emerged over time as a more efficient provider of hiring services (particularly farmer-tofarmer services) than the public sector. Conditions are consistent with the hypotheses that, because of generally low support for the agricultural sector in Nigeria in the past few decades, agricultural mechanization (tractor use in particular) has remained low despite the declining share of the workforce engaged in the agricultural sector. Agricultural transformation in the form of a declining agricultural labor force has happened partly through the growth in the oil industry since the 1970s. Instead of inducing further exit from farming, tractor adoptions in Nigeria might have helped those who have remained in farming to start expanding their production scale. A knowledge gap, however, still remains regarding the dominance of large tractors and the potential effects of tractor adoptions on smallholders who have yet to adopt them. In Indian context. A rich set of feminist perspectives on the varied and often contradictory nature of state practices, structures, and ideologies Growing socio-economic inequality and exclusion are defining features of the twenty-first century. While debates on globalization, free trade, and economic development have been linked to the paradigm of "neo-liberalism," it does not explain all the forms of social change that have been unfolding in comparative contexts. Feminists Rethink the Neoliberal State provides a timely intervention into discussions about the boundaries, practices, and nature of the post-liberalization state, suggesting that an understanding of economic policies, the corresponding rise of socio-economic inequality, and the possibilities for change requires an in-depth reconceptualization. Drawing on original field research both globally and within the United States, this volume brings together a rich set of perspectives on the varied and often contradictory nature of state practices, structures and ideologies in the post-liberalization era. The essays develop an interdisciplinary approach that treats an understanding of historically-specific forms of inequality—such as gender, race, caste, sexuality and class—as integral to, rather than as after-effects of, the policies and ideologies associated with the "neoliberal project." The volume also tackles central questions on the restructuring of the state, the state's power operations, the relationship between capital and the state, and its interactions with the institutions and organizational forms of civil society in the post-liberalization era. As such, Feminists Rethink the Neoliberal State examines both what is distinctive about this post-liberalization state and what must be contextualized as long-standing features of modern state power. A truly international and interdisciplinary volume, Feminists Rethink the Neoliberal State deepens our understanding of how policies of economic liberalization shape and produce various forms of inequality. In the book series, their versatile strategies and skilled tactics are also revealed under the shiny commercial slogans, of course, with their own chariots. This story about transformations began when the country was in the upheaval of 'change' when organizations were craving to cope with the opening up of the economy. Changes in national and global economies made all familiar things seem outdated. Organizations and managers grappled with the transformations required to respond to the changing business landscape and acquire the required skills and role orientations. The transformation was initiated by some organizations holistically by the development of their employees across all levels. All organizations were concerned with growth, expansion, the introduction of new technology and long-serving employees. Most of them had not experienced other organizations, nor were they exposed enough to perceive the role-transformations required. They were devoted and knew their job and were perplexed at the external changes. They aspired to participate in the organization's forward movement. However, their roles in the same or the new challenges were not clear to them. Transforming Indian Managers explores through telling, analyzing and interpreting stories. This publication gives a wide-ranging perspective on the present state of mechanization in the developing world, and, as such, constitutes a solid platform on which to build strategies for a sustainable future. Farm mechanization forms an integral plank in the implementation of sustainable crop production intensification methodologies and sustainable intensification necessarily means that the protection of natural resources and the production of ecosystem services go hand-in-hand with intensified production practices. This requires specific mechanization measures to allow crops to be established with minimum soil disturbance, to allow the soil to be protected under organic cover for as long as possible, and to establish crop rotations and associations to feed the soil and to exploit crop nutrients from various soil horizons. This work is the starting point to help the reader understand the complexities and requirements of the task ahead. Sometimes it seems as if business exists purely to enrich a small elite. While the world is facing unprecedented challenges, it appears that businesses are only interested in making profits or paying bonuses. Big businesses are powerful machines. We all know they have the potential to cause enormous social and environmental harm; but with their resources and expertise they can also be great engines of positive change. Rather than fighting the power of business, should we be seeking to harness it? Everybody's Business is a journey through the business world. We meet the companies that are driving business forward by mobilising to tackle the challenges we all face. At its heart, this is a story of businesses doing what they do best: delivering products and services that people need, creating jobs and finding new ways to solve old problems. It's a story of people taking the initiative, and finding inspiration in the positive impact of their actions. We see how some of today's leading companies are realising that lasting success comes from having a purpose broader than making a profit. They know that business should benefit customers, employees, suppliers, neighbours and the wider world, as well as shareholders. Enduring value comes from making business work for everybody.
